Lab Assignment 4

Navigate over to ESPN's website for NHL Historic Player Points Statistics, for the years 2014-2015. This *page* has a table on it with a few stats we're interested in obtaining. But it's a bit messy! Clean it up for us, using the appropriate commands to:

1. Load up the table on this page into a Pandas dataframe
2. Rename the columns so that they match the column definitions on the website
3. Get rid of any erroneous rows that has at least 4 NANs in them
4. Get rid of the **RK** column
5. Ensure there are no nan "holes" in your index
6. Check the dtypes of all columns, and ensure those that *should* be numeric are numeric

Lab Questions

3 points possible (graded)

Please enter a numeric value (e.g. 0, 1, 10.5, etc) which correctly answers the question(s) below:

After completing the 6 steps above, how many rows **remain** in this dataset? (Not to be confused with the index!)

▶ 6. Data Modeling II

▶ 7. Evaluating Data

▶ Course Wrap-up

How many unique **PCT** values exist in the table?

What is the **value** you get by adding the **GP** values at *indices* 15 and 16 of this table?
